SUMMARY

Senior full-stack engineer with 7+ years shipping production SaaS in TypeScript, React and Node.js. Recent work spans a UK healthcare platform covering scheduling, multi-tenant access control and audit logging over sensitive personal data, a payments and settlement platform built from nothing, and real-time collaboration infrastructure. I own architecture end to end and stay hands-on from schema design through to CI/CD and production monitoring. I work directly with founders on live codebases, fully remote across UK, EU and US time zones.

SKILLS

Languages: TypeScript, JavaScript, Python, Node.js, Java, C#, Rust, SQL, Solidity

Frontend: React, Next.js, Redux, Context API, Tailwind CSS, responsive and cross browser UI, real-time and collaborative interfaces

Backend and serverless: Node.js, NestJS, Fastify, Express, ASP.NET Core, REST and GraphQL APIs, serverless functions, event-driven architecture, background jobs, microservices

Databases and modelling: PostgreSQL (advanced queries, indexing, partitioning, row level security), Supabase, MongoDB, Redis, SQL Server, multi-tenant schema design

Platform and SaaS: Multi-tenant architecture, RBAC and permission systems, workflow and approval engines, scheduling and capacity allocation, audit logging

APIs and integrations: OpenAPI and Swagger, webhooks, Stripe, Paystack, KYC and AML flows, merchant settlement and reconciliation

Testing and delivery: Jest, unit and integration tests, strict TypeScript, code review and release standards, GitHub Actions CI/CD, PostHog analytics

Cloud and DevOps: AWS (EC2, S3, RDS, Lambda), Docker, Docker Compose, DigitalOcean, monitoring and structured logging

EXPERIENCE

Chief Technology Officer and Full-Stack Engineer, Usefleet

Mar 2026 to Present, Remote

- Own technical direction and lead engineering delivery, with the product surface and how it is built as my first concern.
- Define system architecture, module boundaries and the delivery roadmap, and set the code review, Jest coverage and release standards the team works to.
- Build and direct a small engineering team while staying hands-on in the day to day work.

Full-Stack Engineer and Product Builder, MySocioRep

2026 to Present, Remote

- My own product: a social media growth platform that helps founders, creators and businesses keep a consistent presence on LinkedIn and X.
- Built the Next.js web app, the interface people use to create, publish and engage with their content.
- Built the server and API layer on Node.js and Fastify as a lightweight base for the app's requests, and wired the frontend to it.
- Own the product as well as the code: turning the time and planning that consistent posting takes into workflows, and making the architecture calls on both ends.

Principal Engineer, Kinem Labs (BuildArena)

Jun 2025 to Jun 2026, Remote

- Built real-time multiplayer collaboration over WebSockets, keeping editor, canvas and output state in sync across people working in the same workspace.
- Delivered a live visualisation layer that redraws program structure and state relationships as users type.
- Architected the full platform: project and workspace state, build orchestration and authenticated API surfaces.
- Ran the whole lifecycle: self hosted Docker infrastructure (Dokploy, Traefik), GitHub Actions CI/CD and PostHog analytics.

Senior Full-Stack Engineer, Ridgeway, Texas, United States

Jan 2026 to Jun 2026, Contract, Remote

- Architected and built an AI natural language to action system, translating user input into operations executed across the stack.
- Implemented a secure payment system with confidentiality guarantees, handling sensitive transaction flows safely across backend and frontend.
- Work shipped on this product processed over $300,000 in transaction volume.
- Covered the critical flows with Jest so payment paths could not regress quietly, and shipped through GitHub Actions CI/CD on AWS.

Senior Full-Stack Engineer, Timglobal, UK (Healthcare SaaS)

Jul 2025 to Dec 2025, Contract, Remote

- Shipped features across a live multi-tenant healthcare platform used by care coordinators, field staff and providers.
- Built staff scheduling screens covering shift allocation, availability and capacity, giving operational leads a clear view of workload.
- Built real-time messaging and notification delivery that stayed responsive under sustained concurrent load.
- Implemented workflow steps for care task assignment, handover and approval, replacing manual coordination between provider teams.
- Modelled multi-tenant data isolation and role based access control in PostgreSQL, with audit logging and compliance reporting meeting UK care sector requirements.

Senior Full-Stack Engineer and Tech Lead, Cryptrapay

Jul 2024 to Dec 2024, Contract, Remote

- Founding engineer on a payments and settlement platform built from nothing, owning backend, frontend and infrastructure.
- Built a Node.js and NestJS backend for multi-currency wallet management, merchant onboarding and real-time reconciliation, with React and TypeScript screens on top.
- Reconciliation work kept ledger state consistent across systems and cut payment failures by 35%.

Senior Backend Engineer, Allark

Mar 2023 to Jun 2024, Contract, Remote

- Built a type safe React and TypeScript frontend for complex real-time workflows, cutting runtime errors by 70%.
- Engineered the WebSocket layer carrying 1,000+ concurrent sessions at sub-50ms latency in production.
- Sole engineer on the platform, responsible for architecture and end to end delivery from zero to production.
- Held 99.9% availability through circuit breaker patterns and fault tolerance across every external integration.

Full-Stack Engineer, Neatio

Jul 2022 to Jan 2023, Contract, Remote

- Delivered scalable API infrastructure and developer documentation that cut third party integration time by 60%.
- Built backend services and integrations with retry and recovery logic, ensuring reliable processing across systems.

Full-Stack Engineer and Tech Lead, Blockride

Sep 2021 to Aug 2022

- Led full-stack delivery of a marketplace platform, owning frontend and backend architecture in a startup team.
- Built a React and Next.js frontend on a Node.js backend supporting high volume marketplace transactions.
- Cut fraudulent transactions by 90% with multi-step verification workflows and atomic transaction logic.

EARLIER EXPERIENCE

Full-Stack Engineer, Bole (Apr 2020 to Feb 2021, Remote). React and Node.js application with ethers.js integration for token swaps and liquidity management.

Full-Stack Developer, Remax Real Estate (MaltaHomeSearch), Malta (Jun 2019 to Mar 2020, Remote). React, Next.js and Node.js property platform serving 1,000+ monthly active users across 15+ REST endpoints on PostgreSQL.

SELECTED PROJECTS

BuildArena (buildarena.dev). Collaborative build platform. Editor, canvas and output stay in sync across everyone in a workspace, with a visualisation layer that redraws program structure as you type.

Cryptrapay (cryptrapay.com). Payments and settlement platform built from zero, with multi-currency wallet screens, merchant onboarding and live transaction state.

Hookroast (hookroast.com). Pre-send deliverability platform for cold email: spam scoring on drafts, recipient verification, domain reputation and SPF, DKIM and DMARC checks.

MySocioRep (mysociorep.com). Social media growth platform for founders, creators and businesses building a steady presence on LinkedIn and X. Next.js frontend on a Node.js and Fastify API.
